IVL BEDRIJFSKOELING

Every product is different, so every product makes different demands on the technical installation to be used.

Over the past decades, IVL Bedrijfskoeling B.V. has specialised in the field of PVF, in particular refrigeration installations for the long-term storage of hard and soft fruit and meat products, among others. IVL designs, realises and maintains special freezer and refrigeration areas, both nationally and internationally. From compact and simple to extensive and distinctive. IVL provides inventive and expert advice and offers high-tech solutions for fruit cultivation companies, distribution centres, auctions, catering companies and the wholesale trade, among others.

Custom solutions are developed and realised in house by our own engineers. We employ specialists in the fields of refrigeration, air conditioning and the associated control systems.

REFRIGERATORS AND FREEZERS

IVL installs refrigerators and freezers for fruit cultivation companies, distribution centres, auctions, catering and the wholesale trade.

You can come to us for small, simple solutions and for fully automated systems with many refrigerator and freezer compartments. We not only handle the design, but also the complete installation, any furnishings and maintenance.

IVL Bedrijfskoeling is a specialist in the food-processing industry. With our refrigerators and freezers we offer well-thought-out solutions that comply with all statutory requirements regarding hygiene, quality and power consumption.

ULO/CA/CA REFRIGERATION

Refrigeration is an indispensable part of the foodstuffs industry. This knowledge and technology allow you to guarantee shelf life, delay product deterioration and ensure availability throughout the year. With IVL Bedrijfskoeling you can keep your products fresh for long periods.

IVL Bedrijfskoeling specialises in the preservation of hard and soft fruit. If you require longer shelf life for your products, ULO/CA refrigerators are the ideal solution.

IVL Bedrijfskoeling is happy to be of service to you by installing ULO/CA refrigeration to optimise your shelf life process. ULO/CA refrigeration works with a low oxygen concentration, which means that products keep for longer and it gives you excellent control over the product to be cooled.

Naturally, IVL ensures that your air-conditioned areas comply with hygiene laws and regulations.

IVL provides innovative, sustainable and energy efficient systems.

NATURAL REFRIGERANTS

Due to statutory restrictions imposed upon chemical coolants, IVL Bedrijfskoeling has for a long time been developing and realising installations using natural refrigerants and environmentally friendly coolants such as ammonia, CO₂ and propane.

These coolants are also a good choice from an ecological point of view: they do not contribute to the destruction of the ozone layer or to global warming. Attractive subsidy schemes exist to promote this application.

IVL has full expertise regarding natural coolants. This means that with IVL you ensure energetically attractive and flexible applications with low maintenance costs. Ask us about the options.

AIR CONDITIONING

Climate control and air conditioning are our core activities. We are experts in the installation, service and maintenance of air conditioning systems.

As specialists we offer you a healthy living climate at any temperature and for any room. We monitor your climate using advanced systems and expertise.

We choose durable quality and offer various top brands. There is a huge variety of systems and models and there are lots of options. The technology is changing all the time and new systems are becoming ever more attractive, ever quieter, ever more energy efficient and ever more user-friendly.

IVL looks after everything from advice to installation according to your wishes. We work with you to find the best custom-made solution for you and your budget.

CONTROL

IVL is a dealer for Auxcis, a renowned expert in commercial automation. Our extensive experience with specific applied refrigeration systems has also led to us developing control software in house that we can use in new projects.

For fruit cooling we use the Auxcis fruit controllers. This controller was specially developed for use in the PVF sector and includes all relevant functions for the perfect control of climate in the refrigerated area. This creates a homogeneously quiet installation with shorter refrigeration actions and lower power consumption.

From our site in Wijk bij Duurstede, we can monitor your installation anywhere in the world; this means we may be able to remedy any breakdowns before you have even detected them.

IVL IS ON YOUR SIDE FOR OTHER APPLICATIONS TOO!

IVL Bedrijfskoeling works with you to produce an accurate schedule for the design, installation and completion of the installation. We schedule our technical specialists and keep in touch so that your project runs smoothly.

You don't need to waste your time worrying about the details of our technical field. We ensure that the complex choices are clearly explained to you and that our advice is realistic and simple.

If you want to know more about our refrigeration solutions and the options they give you, just contact our advisers. They will be happy to help you find the right solution. We can help with renovation projects and multi-year maintenance contracts.

The quality of service and maintenance are very important for the continuity of your production process. IVL Bedrijfskoeling has a separate Service and Maintenance division. A 24/7 fault service is standing by at all times.

Do you want to discuss your wishes or ideas, ask our advice or just get to know us? Great!
